INTRODUCTION

The Tung-lu Hydro Power Plant is located on the Fu-chun Chiang (River) 5.9 nautical miles south of the center of Tung-lu.

BASIC DESCRIPTION

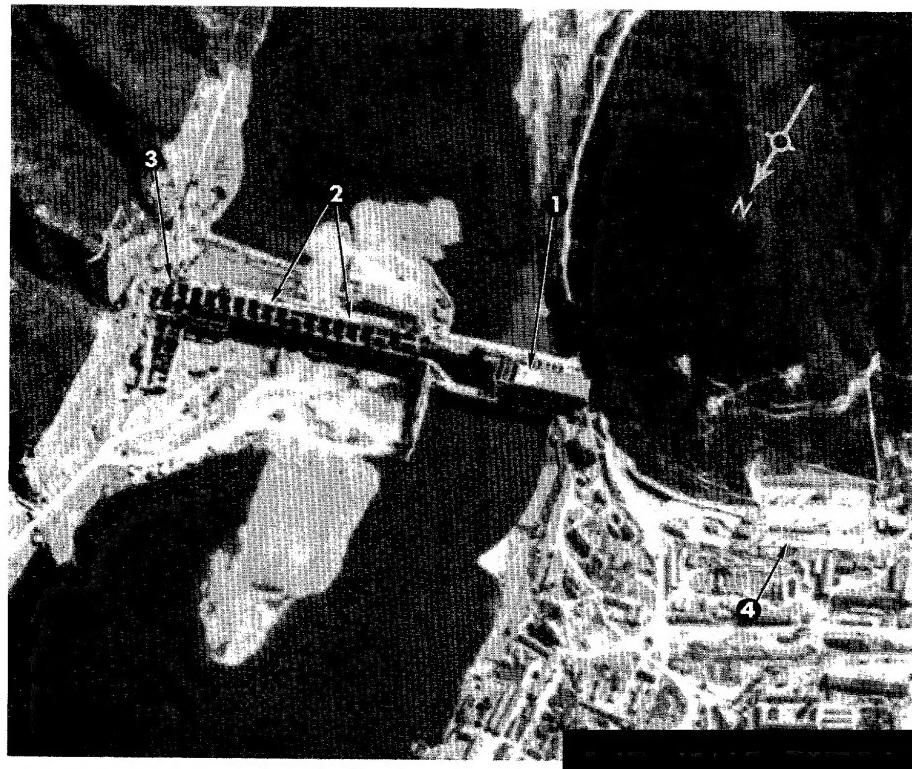

The Tung-lu Hydro Power Plant, which is still under construction, is a consolidated type plant with a concrete gravity dam. The turbogenerators will be located in the power house on the west side of the dam. When completed this installation will probably have six turbogenerators. Due to the small scale of the photography, the transformers could not be identified.

25X1D This plant was in a suspended state of construction from [REDACTED] to [REDACTED]

25X1D

[REDACTED] construction was resumed. The dam now extends across the river, but no water has been impounded. Possible locks for small ships are under construction on the east side of the dam. A switching yard is being constructed about 800 feet to the west of the dam.
